## PLEASE NOTE:

The index on the next pages list general application kits that have been built in the past.

Fleet Electric can custom build a variety of kits for specific applications to include different length cables, special inverter remote start/stop circuits, special controls and other accessories.

Fleet Electric offers high-quality inverters and other products from many manufacturers.

Not all are shown in the following kits.

While Vanner<sup>®</sup> is our primary inverter supplier; Fleet also offers products from Dimensions<sup>™</sup> / Sensata, Samlex America, Xantrex<sup>™</sup> and others upon request.

We also develop wiring kits for many different applications.

Please contact us to see if the brand you or your customer is looking for can be incorporated into a Fleet Gold<sup>®</sup> kit.

Contact Bob Hanks: [bhanks@fleetelectric.com](mailto:bhanks@fleetelectric.com) for:

- Inverter kit development.
- Kit quoting
- Trouble shooting.

Contact Kevin Fogarty: [kfogarty@fleetelectric.com](mailto:kfogarty@fleetelectric.com) for:

- Processing purchase orders.
- Internal order tracking.

Or call: **1-800-442-6668** if you need help.

Check our website [www.fleetelectric.com](http://www.fleetelectric.com) for product and service information

**FLEET GOLD® KIT # 004641**

**POWER POINT SOCKET KIT w/ VOLTAGE SENSING-TIMER CIRCUIT**

**Features:**

- Voltage sensing / timer circuit. Prevents deep battery discharge.
- Three heavy duty power point sockets.
- 18' power harness.
- 15amp fuse kit.

**CIRCUIT DESCRIPTION:**

1. When the battery voltage is above 12.9 volts the three power sockets will turn on.
2. At the point the battery voltage drops to 12.7 volts the timer circuit turns on keeping the three power point sockets alive for one hour. If within the one hour the battery voltage drops below 11.9 volts the timer circuit will turn off, removing the voltage to the three power point sockets.

The system will automatically reset when the battery voltage is raised to 12.9 volts or above.

FLEET GOLD® KIT # 005392

**POWER POINT SOCKET KIT w/ VOLTAGE SENSING-TIMER CIRCUIT**

**Features:**

- Voltage sensing / timer circuit. Prevents deep battery discharge.
- Two heavy duty power point sockets.
- One dual USB power point socket.
- 18' power harness.
- 15amp fuse kit.

**CIRCUIT DESCRIPTION:**

1. When the battery voltage is above 12.9 volts the three power sockets will turn on.
2. At the point the battery voltage drops to 12.7 volts the timer circuit turns on keeping the three power point sockets alive for one hour. If within the one hour the battery voltage drops below 11.9 volts the timer circuit will turn off, removing the voltage to the three power point sockets.

The system will automatically reset when the battery voltage is raised to 12.9 volts or above.

FLEET GOLD® KIT # RCT14001

VOLTAGE SENSING / TIMER CONTROL CIRCUIT

INVERTER REMOTE TYPE: VANNER IQ SERIES INVERTERS ONLY

FLEET GOLD® KIT # RCT14001 INCLUDES THE FOLLOWING ITEMS:

<p>VOLTAGE SENSING/TIMER CONTROL CIRCUIT. IN-LINE FUSE &amp; HOLDER</p>	<p>PARTS LIST WIRING DIAGRAM</p>
---	--------------------------------------

**CIRCUIT DESCRIPTION:**

1. When the battery voltage is above 12.9 volts the voltage sensing module will turn on and feed 12v power to the inverter's remote circuit.
2. The inverter remote will turn the inverter on/off.
3. At the point the battery voltage drops to 12.7 volts the timer circuit turns on keeping the inverter remote circuit alive for one hour. If within the one hour the battery voltage drops below 11.9 volts the timer circuit will turn off, removing the voltage to the inverter remote switch.

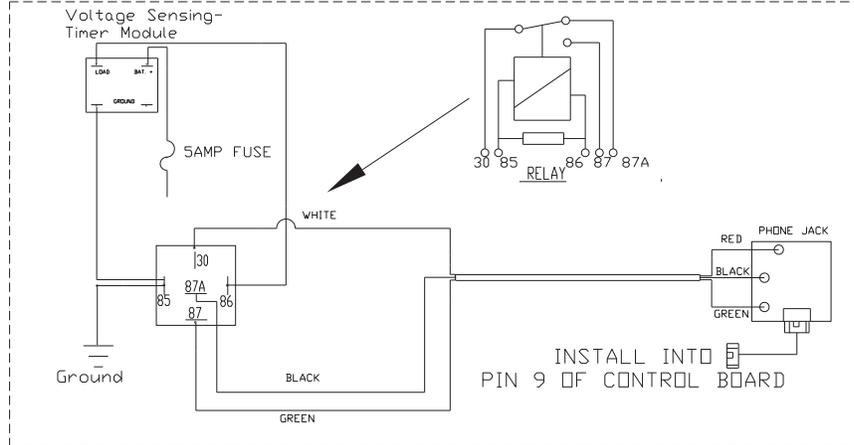

The system will automatically reset when the battery voltage is raised to 12.9 volts or above.

1. When the battery voltage is above 12.9 volts the voltage sensing module will turn on and feed 12v power to the inverter remote switch.
2. The inverter remote will turn the inverter on/off.
3. At the point the battery voltage drops to 12.7 volts the timer circuit turns on keeping the inverter remote switch alive for one hour. If within the one hour the battery voltage drops below 11.9 volts the timer circuit will turn off, removing the voltage to the inverter remote switch.

The system will automatically reset when the battery voltage is raised to 12.9 volts or above.
